

Infectious Disease Procedure

If your child is showing signs of an infectious condition you will be contacted immediately to be informed. We will reassure you of your Child's condition and the child will be taken into a calm environment away from the other children for their protection. Your child will be treated with care until they have been collected. All precautions will have been adhered to to protect staff whilst dealing with your child to prevent the spread of the infection. We will refer to the "Guidance on Infection Control" which can be found in the front porch.

Once your child has been collected great care will be taken to ensure all toys and equipment are sterilized and all parents will be informed. Once your child has been seen by the doctor they will also inform you the length of time your child should be kept off Nursery.
